

## A játék lényege röviden

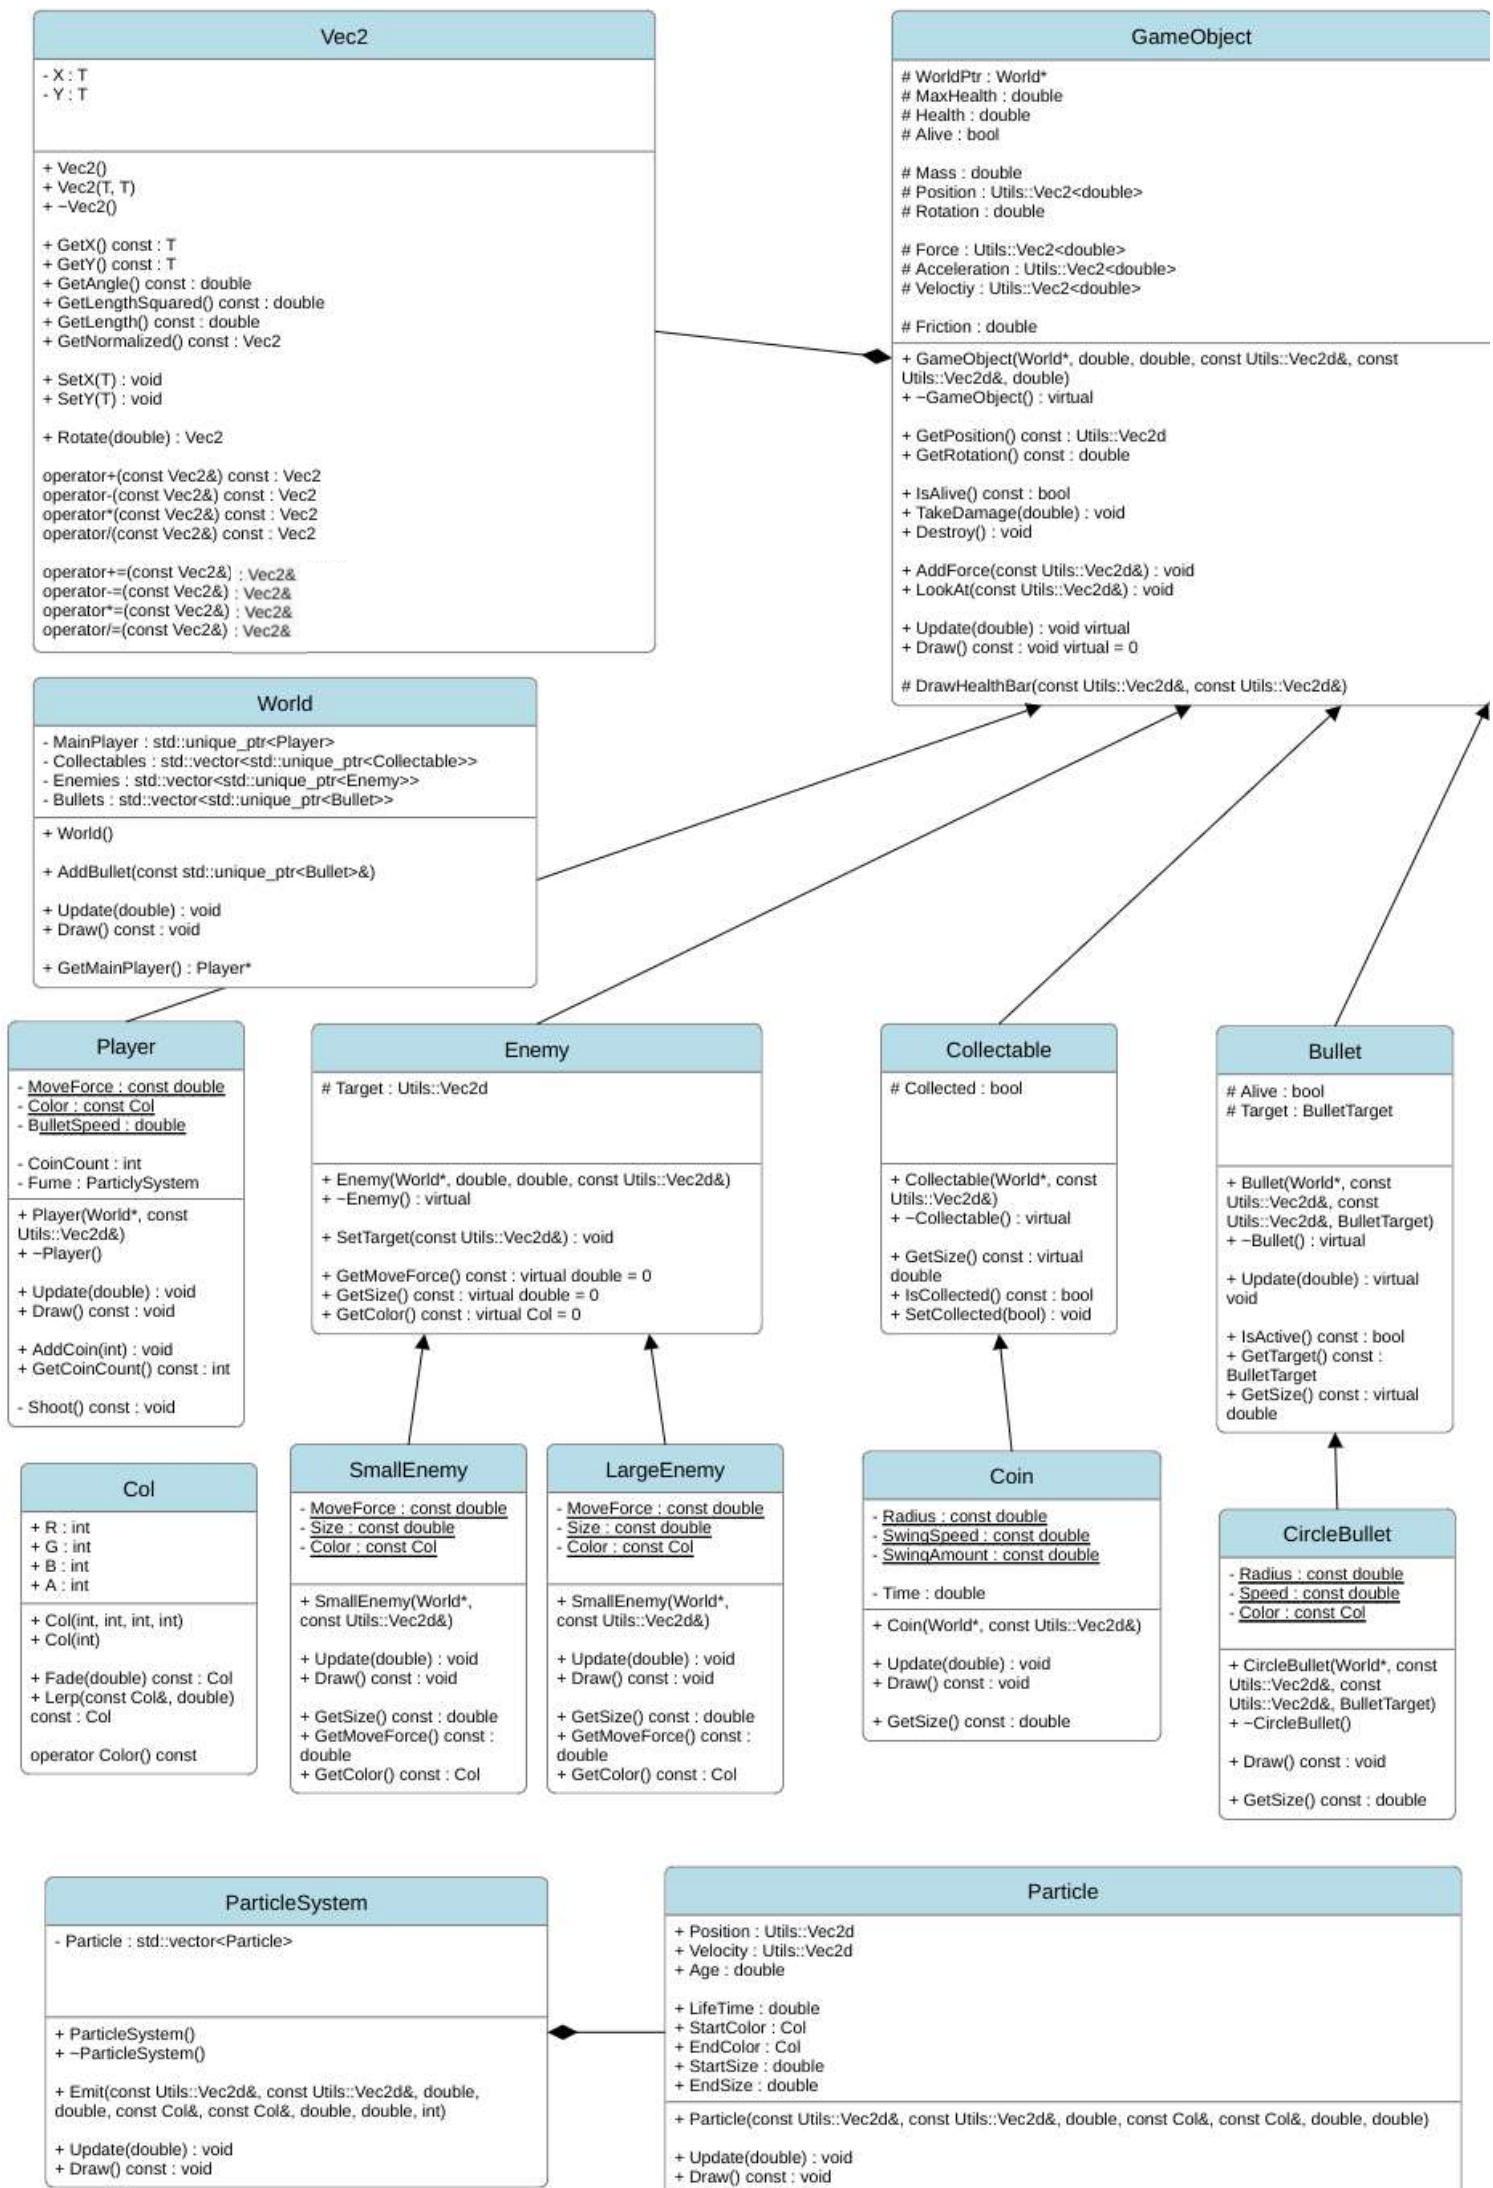

Egy két dimenziós (grafikus), lövöldözős játékot készítettem.

A játékos célja, hogy minél több ideig éljen, és minél több coin-t szedjen fel. A játék során ellenfelek közelednek a játékos felé, minél több coin-ja van, annál több.

Az ellenfelek úgy tudnak sebezni, hogy nekimennek a játékosnak. A különböző méretű ellenfeleknek eltérő mennyiségű hp-ja van. A felhasználónak menekülnie kell az ellenfelek elől, és le kell lőnie őket. Ha 0 alá csökken a hp-ja, akkor meghal és vége a játéknak.

A játékost a WASD billentyűkkel lehet irányítani, illetve az egérrel lehet forogni és lőni (a játékos az egér felé néz és arra is lő)

Minden akciót valamilyen vizuális visszajelzés kísér (pl. ha felvesz egy coin-t, nő egy számláló, ha lelő egy ellenfelet, az eltűnik).

A program felépítése a következő:

-A main file-ban megnyitok egy ablakot Raylibbel, utána létrehozok egy World-öt és amíg nyitva van az ablak, meghívom az Update és Draw metódusait.

-A világ tartalmazza a játékost, az összes Coin-t, Enemy-t és Bullet-ot.

-A játékos figyeli a billentyűzetet és az egeret a mozgáshoz, az Enemy-k pedig automatikusan mozognak a játékos felé. A Coin-ok és a Bullet-ok szintén maguk mozognak.

-Minden objektum, többek között azok is, amiket felsoroltam a GameObject osztályból származik. A GameObject osztály pedig tartalmaz egy World\*-t, ami az őt tartalmazó osztályra mutat. Ez azért szükséges, mert ha a játékos lő, akkor létrehoz egy Bullet-ot, és hozzá kell adnia a World-höz, amiben van. Lehet, hogy lenne ennél jobb megoldás is, de azért nincs vészesen sok objektum, szóval egy pointer talán nem nagy gond (viszont nagyon megkönnyíti a dolgom).

-A World.Update update-el mindent (mozgat), ezen felül ellenőrzi a következő ütközéseket: Player - Collectable, Player - Bullet (ilyen egyébként nincs végül), Enemy - Bullet, Player - Enemy. Ha ütközés történt, törli a megfelelő objektumokat.

-A ParticleSystem egy helyen jelenik meg, méghozzá a játékos hoz létre egy példányt, és amikor mozog, meghívja az Emit metódust, ami kibocsát néhány Particle-t. Természetesen a játékos Update metódusa meghívja a ParticleSystem Update metódusát, az pedig a Particle-ök Update metódusait, így egy idő után a Particle-ök eltűnnek (a ParticleSystem törli a öreg Particle-öket).

-A különböző méretű ellenfelek valóban csak a méretükben és a sebességükben térnek el (de egy kicsit máshogy is vannak rajzolva), így tényleg valamennyire felesleges az öröklődés, de eredetileg terveztem ennél nagyobb eltérést is.

-Nagyjából mindenhez írtam egy rövid tesztet, amelyek GTest-et használnak. A Raylib függőséget sajnos nem nagyon lehet kiküszöbölni, mert a program számos része - még a nem grafikus részek is - használnak Raylib-es függvényeket, és építenek arra, hogy az ablak inicializálva van. Például amikor új ellenfeleket hoz létre a világ, akkor lekérdezi az ablak méretét. (Ha nem lenne inicializálva az ablak, ezt nem tudná megtenni, de használok például ütközés ellenőrző függvényeket, illetve Raylib struktúrákat is használok stb.)

-Memóriaszivárgás nincs, ezt az AddressSanitizer segítségével ellenőriztem.

-A CMakeLists.txt-t végül teljesen újraírtam, egy libet hozok létre a kódból, majd ezt linkelem magához a játékhoz, és egy teszt programhoz is. Az assets is átkerült a gyökérbe.

-Ajánlom a shell script-ek használatát (run\_game.sh, run\_test.sh), ezek lefordítják és le is futtatják az adott programot.

-A program forráskódja fent van GitHubon: [https://github.com/mandliors/Prog2\\_NHF](https://github.com/mandliors/Prog2_NHF)

Minden kulcsfontosságú részhez írtam egy rövid tesztet:

- Tesztelem a Raylib inicializálását (ez feltétele annak, hogy a többi teszt hibamentesen lefusson (részletesbb magyarázat a terv.pdf-ben található)
- A Vec2d osztály konstruktorát és néhány metódusát tesztelem
- Létrehozok egy világot, ami létrehoz egy játékost, majd lerakok egy coin-t a játékos fölé. Meghívom a World.Update-et, ekkorra a játékosnak fel kellett szednie a coin-t, és pont ezt tesztelem
- Kilövök egy lövedéket a játékos irányába, update-elem a világot addig, amíg oda nem ér a lövedék, és ellenőrzöm, hogy meghalt-e a játékos
- Majd létrehozok egy ellenfelet, és ugyanúgy járok el, mint a lövedékkel (azaz megvárom, amíg nekimegy a játékosnak, és megnézem, hogy meghalt-e)
- Két Enemy-Bullet collision-t vizsgállok (az egyik igaz, a másik hamis)
- A Col osztály konstruktorait és a Fade, illetve a Lerp metódusokat is tesztelem
- Írtam egy tesztet a ParticleSystem-hez is, ami a Particle-ök számát vizsgálja (kezdetben 3, 1 másodperc múlva pedig 0)

A teszt indításához a run\_test.sh script futtatását javaslom, ami lefordítja a teszt programot és futtatja is.

# Chapter 1

## Namespace Index

### 1.1 Namespace List

Here is a list of all namespaces with brief descriptions:

|                              |       |    |
|------------------------------|-------|----|
| <a href="#">AssetManager</a> | ..... | 9  |
| <a href="#">Utils</a>        | ..... | 10 |

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

|                            |    |
|----------------------------|----|
| Col . . . . .              | 18 |
| GameObject . . . . .       | 25 |
| Bullet . . . . .           | 13 |
| CircleBullet . . . . .     | 15 |
| Collectable . . . . .      | 20 |
| Coin . . . . .             | 16 |
| Enemy . . . . .            | 22 |
| LargeEnemy . . . . .       | 30 |
| SmallEnemy . . . . .       | 36 |
| Player . . . . .           | 34 |
| ParticleSystem . . . . .   | 33 |
| Utils::Vec2< T > . . . . . | 38 |
| World . . . . .            | 48 |

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

|  |    |
|--|----|
| <a href="#">Bullet</a>                 | 13 |
| <a href="#">CircleBullet</a>           | 15 |
| <a href="#">Coin</a>                   | 16 |
| <a href="#">Col</a>                    | 18 |
| <a href="#">Collectable</a>            | 20 |
| <a href="#">Enemy</a>                  | 22 |
| <a href="#">GameObject</a>             | 25 |
| <a href="#">LargeEnemy</a>             | 30 |
| <a href="#">ParticleSystem</a>         | 33 |
| <a href="#">Player</a>                 | 34 |
| <a href="#">SmallEnemy</a>             | 36 |
| <a href="#">Utils::Vec2&lt; T &gt;</a> | 38 |
| <a href="#">World</a>                  | 48 |

# Chapter 4

## File Index

### 4.1 File List

Here is a list of all files with brief descriptions:

|                                       |    |
|---------------------------------------|----|
| src/main.cpp                          | 61 |
| src/AssetManager/AssetManager.cpp     | 51 |
| src/AssetManager/AssetManager.h       | 51 |
| src/Bullets/Bullet.cpp                | 52 |
| src/Bullets/Bullet.h                  | 52 |
| src/Bullets/CircleBullet.cpp          | 52 |
| src/Bullets/CircleBullet.h            | 52 |
| src/Collectables/Coin.cpp             | 53 |
| src/Collectables/Coin.h               | 53 |
| src/Collectables/Collectable.h        | 53 |
| src/Collisions/Collisions.cpp         | 54 |
| src/Collisions/Collisions.h           | 56 |
| src/Color/Color.cpp                   | 58 |
| src/Color/Color.h                     | 58 |
| src/Enemies/Enemy.h                   | 58 |
| src/Enemies/LargeEnemy.cpp            | 59 |
| src/Enemies/LargeEnemy.h              | 59 |
| src/Enemies/SmallEnemy.cpp            | 59 |
| src/Enemies/SmallEnemy.h              | 59 |
| src/GameObjects/GameObject.cpp        | 60 |
| src/GameObjects/GameObject.h          | 60 |
| src/GameObjects/Player.cpp            | 61 |
| src/GameObjects/Player.h              | 61 |

| src/Utils/Vec2.h                      | 62 |
| src/World/World.cpp                   | 64 |
| src/World/World.h                     | 64 |

## Chapter 5

# Namespace Documentation

### 5.1 AssetManager Namespace Reference

#### Functions

- Texture2D \* [GetTexture](#) ([TextureType](#) asset)

#### 5.1.1 Enumeration Type Documentation

##### 5.1.1.1 TextureType

```
enum class AssetManager::TextureType [strong]
```

Enum class for texture type.

#### Enumerator

|             |  |
|-------------|--|
| SMALL_ENEMY |  |
| LARGE_ENEMY |  |
| ASSET_COUNT |  |

#### 5.1.2 Function Documentation

##### 5.1.2.1 GetTexture()

```
Texture2D * AssetManager::GetTexture (  
    TextureType asset )
```

Returns the texture of the asset.

#### Parameters

|              |                  |
|--------------|------------------|
| <i>asset</i> | The texture type |
|--------------|------------------|

**Returns**

Texture2D\* The texture of the asset ("AssetManager keeps ownership")

**5.1.2.2 LoadAssets()**

```
void AssetManager::LoadAssets ( )
```

Loads all the necessary images.

**5.1.2.3 UnloadAssets()**

```
void AssetManager::UnloadAssets ( )
```

Unloads all the images loaded previously.

## 5.2 Utils Namespace Reference

**Classes**

- class [Vec2](#)

**Functions**

- template<typename T >  
std::ostream & [operator<<](#) (std::ostream &os, const [Vec2](#)< T > &vec)

### 5.2.1 Typedef Documentation

**5.2.1.1 Vec2d**

```
typedef Vec2<double> Utils::Vec2d
```

**5.2.1.2 Vec2i**

```
typedef Vec2<int> Utils::Vec2i
```

### 5.2.2 Function Documentation

**5.2.2.1 operator<<()**

```
template<typename T >  
std::ostream & Utils::operator<< (  
    std::ostream & os,  
    const Vec2< T > & vec )
```

Inserts a vector into an output stream.

## Parameters

|            |                   |
|------------|-------------------|
| <i>os</i>  | The output stream |
| <i>vec</i> | The vector        |

## Returns

std::ostream& The modified output stream

**5.2.2.2 Vector2ToVec2()**

```
Vec2d Utils::Vector2ToVec2 (
    const Vector2 & vec )
```

# Chapter 6

## Class Documentation

### 6.1 Bullet Class Reference

```
#include <Bullet.h>
```

#### Public Member Functions

- [Bullet](#) ([World](#) \*worldPtr, const [Utils::Vec2d](#) &position, const [Utils::Vec2d](#) &velocity, [BulletTarget](#) target)
- virtual void [Update](#) (double dt) override
- [BulletTarget](#) [GetTarget](#) () const
- virtual double [GetSize](#) () const =0

#### Public Member Functions inherited from [GameObject](#)

- [GameObject](#) ([World](#) \*worldPtr, double health=0.0, double mass=0.0, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero](#)(), double friction=0.00)
- [Utils::Vec2d](#) [GetPosition](#) () const
- double [GetRotation](#) () const
- bool [IsAlive](#) () const
- void [TakeDamage](#) (double damage)
- void [AddForce](#) (const [Utils::Vec2d](#) &force)
- void [LookAt](#) (const [Utils::Vec2d](#) &target)

#### 6.1.1 Member Enumeration Documentation

##### 6.1.1.1 BulletTarget

```
enum class Bullet::BulletTarget [strong]
```

Enum class for bullet target type (the bullet only damages the target type)

#### Enumerator

|        |  |
|--------|--|
| PLAYER |  |
| ENEMY  |  |

## 6.1.2 Constructor & Destructor Documentation

### 6.1.2.1 Bullet()

```
Bullet::Bullet (
    World * worldPtr,
    const Utils::Vec2d & position,
    const Utils::Vec2d & velocity,
    BulletTarget target ) [inline]
```

Constructs a new [Bullet](#) object.

#### Parameters

|                 |                                |
|-----------------|--------------------------------|
| <i>worldPtr</i> | The world that owns the object |
| <i>position</i> | The position of the object     |
| <i>velocity</i> | The velocity of the object     |
| <i>target</i>   | The target type of the object  |

### 6.1.2.2 ~Bullet()

```
virtual Bullet::~~Bullet ( ) [virtual], [default]
```

Destroy the [Bullet](#) object (virtual needed for inheritance)

## 6.1.3 Member Function Documentation

### 6.1.3.1 GetSize()

```
virtual double Bullet::GetSize ( ) const [pure virtual]
```

Returns the size of the bullet.

#### Returns

double The size of the bullet

Implemented in [CircleBullet](#).

### 6.1.3.2 GetTarget()

```
BulletTarget Bullet::GetTarget ( ) const [inline]
```

Returns the target type of the bullet.

#### Returns

BulletTarget The target type of the bullet

### 6.1.3.3 Update()

```
void Bullet::Update (
    double dt ) [override], [virtual]
```

Updates the bullet object.

## Parameters

|           |                |
|-----------|----------------|
| <i>dt</i> | The delta time |
|-----------|----------------|

Reimplemented from [GameObject](#).

## 6.1.4 Member Data Documentation

### 6.1.4.1 Target

[BulletTarget](#) `Bullet::Target` [protected]

The documentation for this class was generated from the following files:

- [src/Bullets/Bullet.h](#)
- [src/Bullets/Bullet.cpp](#)

## 6.2 CircleBullet Class Reference

```
#include <CircleBullet.h>
```

### Public Member Functions

- [CircleBullet](#) ([World](#) \*worldPtr, const [Utils::Vec2d](#) &position, const [Utils::Vec2d](#) &direction, [BulletTarget](#) target)
- double [GetSize](#) () const override

### Public Member Functions inherited from [Bullet](#)

- [Bullet](#) ([World](#) \*worldPtr, const [Utils::Vec2d](#) &position, const [Utils::Vec2d](#) &velocity, [BulletTarget](#) target)
- virtual void [Update](#) (double dt) override
- [BulletTarget](#) [GetTarget](#) () const

### Public Member Functions inherited from [GameObject](#)

- [GameObject](#) ([World](#) \*worldPtr, double health=0.0, double mass=0.0, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero](#)(), double friction=0.00)
- [Utils::Vec2d](#) [GetPosition](#) () const
- double [GetRotation](#) () const
- bool [IsAlive](#) () const
- void [TakeDamage](#) (double damage)
- void [AddForce](#) (const [Utils::Vec2d](#) &force)
- void [LookAt](#) (const [Utils::Vec2d](#) &target)

## 6.2.1 Constructor & Destructor Documentation

### 6.2.1.1 CircleBullet()

```
CircleBullet::CircleBullet (
    World * worldPtr,
    const Utils::Vec2d & position,
    const Utils::Vec2d & direction,
    BulletTarget target ) [inline]
```

Constructs a new [CircleBullet](#) object.

**Parameters**

|                  |                                |
|------------------|--------------------------------|
| <i>worldPtr</i>  | The world that owns the object |
| <i>position</i>  | The position of the object     |
| <i>direction</i> | The direction of the object    |
| <i>target</i>    | The target type of the object  |

## 6.2.2 Member Function Documentation

### 6.2.2.1 Draw()

```
void CircleBullet::Draw ( ) const [override], [virtual]
```

Draws the circle bullet object.

Implements [GameObject](#).

### 6.2.2.2 GetSize()

```
double CircleBullet::GetSize ( ) const [inline], [override], [virtual]
```

Returns the size of the circle bullet.

**Returns**

double The size of the circle bullet

Implements [Bullet](#).

The documentation for this class was generated from the following files:

- [src/Bullets/CircleBullet.h](#)
- [src/Bullets/CircleBullet.cpp](#)

## 6.3 Coin Class Reference

```
#include <Coin.h>
```

**Public Member Functions**

- [Coin](#) ([World](#) \*worldPtr, const [Utils::Vec2d](#) &position)
- void [Update](#) (double dt) override
- double [GetSize](#) () const override

## Public Member Functions inherited from [Collectable](#)

- [Collectable](#) ([World](#) \*worldPtr, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero](#)())
- bool [IsCollected](#) () const
- void [SetCollected](#) (bool collected)

## Public Member Functions inherited from [GameObject](#)

- [GameObject](#) ([World](#) \*worldPtr, double health=0.0, double mass=0.0, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero](#)(), double friction=0.00)
- [Utils::Vec2d](#) [GetPosition](#) () const
- double [GetRotation](#) () const
- bool [IsAlive](#) () const
- void [TakeDamage](#) (double damage)
- void [AddForce](#) (const [Utils::Vec2d](#) &force)
- void [LookAt](#) (const [Utils::Vec2d](#) &target)

## 6.3.1 Constructor & Destructor Documentation

### 6.3.1.1 Coin()

```
Coin::Coin (
    World * worldPtr,
    const Utils::Vec2d & position ) [inline]
```

Constructs a new [Coin](#) object.

#### Parameters

|                 |                                |
|-----------------|--------------------------------|
| <i>worldPtr</i> | The world that owns the object |
| <i>position</i> | The position of the object     |

## 6.3.2 Member Function Documentation

### 6.3.2.1 Draw()

```
void Coin::Draw ( ) const [override], [virtual]
```

Draws the coin object.

Implements [GameObject](#).

### 6.3.2.2 GetSize()

```
double Coin::GetSize ( ) const [inline], [override], [virtual]
```

Returns the size of the coin.

#### Returns

double The size of the coin

Implements [Collectable](#).

### 6.3.2.3 Update()

```
void Coin::Update (
    double dt ) [inline], [override], [virtual]
```

Updates the coin object.

#### Parameters

|           |                |
|-----------|----------------|
| <i>dt</i> | The delta time |
|-----------|----------------|

Reimplemented from [GameObject](#).

The documentation for this class was generated from the following files:

- [src/Collectables/Coin.h](#)
- [src/Collectables/Coin.cpp](#)

## 6.4 Col Struct Reference

```
#include <Color.h>
```

### Public Member Functions

- [Col](#) (int *r*, int *g*, int *b*, int *a*=255)
- [Col](#) (int gray)
- [Col Fade](#) (double *t*) const
- [Col Lerp](#) (const [Col](#) &other, double *t*) const
- [operator Color](#) () const

### 6.4.1 Constructor & Destructor Documentation

#### 6.4.1.1 Col() [1/2]

```
Col::Col (
    int r,
    int g,
    int b,
    int a = 255 )
```

Constructs a new [Col](#) object.

#### Parameters

|          |                 |
|----------|-----------------|
| <i>r</i> | The red value   |
| <i>g</i> | The green value |
| <i>b</i> | The blue value  |
| <i>a</i> | The alpha value |

### 6.4.1.2 Col() [2/2]

```
Col::Col (
    int gray )
```

Constructs a new grayscale [Col](#) object (alpha is 255)

#### Parameters

|             |                     |
|-------------|---------------------|
| <i>gray</i> | The grayscale value |
|-------------|---------------------|

## 6.4.2 Member Function Documentation

### 6.4.2.1 Fade()

```
Col Col::Fade (
    double t ) const
```

Fades the color by a certain amount (changes the alpha value)

#### Parameters

|          |                                   |
|----------|-----------------------------------|
| <i>t</i> | The amount to fade by (0.0 - 1.0) |
|----------|-----------------------------------|

#### Returns

[Col](#) The faded color

### 6.4.2.2 Lerp()

```
Col Col::Lerp (
    const Col & other,
    double t ) const
```

Linearly interpolates between two colors.

#### Parameters

|              |                         |
|--------------|-------------------------|
| <i>other</i> | The other color         |
| <i>t</i>     | The interpolation value |

#### Returns

[Col](#) The interpolated color

### 6.4.2.3 operator Color()

```
Col::operator Color ( ) const
```

Converts the color to a Color object (Raylib color)

#### Returns

Color The Color object

### 6.4.3 Member Data Documentation

#### 6.4.3.1 A

```
int Col::A
```

#### 6.4.3.2 B

```
int Col::B
```

#### 6.4.3.3 G

```
int Col::G
```

#### 6.4.3.4 R

```
int Col::R
```

The documentation for this struct was generated from the following files:

- [src/Color/Color.h](#)
- [src/Color/Color.cpp](#)

## 6.5 Collectable Class Reference

```
#include <Collectable.h>
```

#### Public Member Functions

- [Collectable](#) ([World](#) \*worldPtr, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero](#)())
- virtual double [GetSize](#) () const =0
- bool [IsCollected](#) () const
- void [SetCollected](#) (bool collected)

## Public Member Functions inherited from [GameObject](#)

- [GameObject](#) ([World](#) \*worldPtr, double health=0.0, double mass=0.0, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero\(\)](#), double friction=0.00)
- [Utils::Vec2d GetPosition](#) () const
- double [GetRotation](#) () const
- bool [IsAlive](#) () const
- void [TakeDamage](#) (double damage)
- void [AddForce](#) (const [Utils::Vec2d](#) &force)
- void [LookAt](#) (const [Utils::Vec2d](#) &target)
- virtual void [Update](#) (double dt)

## 6.5.1 Constructor & Destructor Documentation

### 6.5.1.1 Collectable()

```
Collectable::Collectable (
    World * worldPtr,
    const Utils::Vec2d & position = Utils::Vec2d::Zero\(\) ) [inline]
```

Constructs a new [Collectable](#) object.

#### Parameters

|                 |                                |
|-----------------|--------------------------------|
| <i>worldPtr</i> | The world that owns the object |
| <i>position</i> | The position of the object     |

### 6.5.1.2 ~Collectable()

```
virtual Collectable::~Collectable ( ) [virtual], [default]
```

Destroys the [Collectable](#) object (virtual needed for inheritance)

## 6.5.2 Member Function Documentation

### 6.5.2.1 GetSize()

```
virtual double Collectable::GetSize ( ) const [pure virtual]
```

Returns the size of the object.

#### Returns

double The size of the object

Implemented in [Coin](#).

### 6.5.2.2 IsCollected()

```
bool Collectable::IsCollected ( ) const [inline]
```

Returns whether the object is collected.

#### Returns

bool True if the object is collected, false otherwise

### 6.5.2.3 SetCollected()

```
void Collectable::SetCollected (
    bool collected ) [inline]
```

Sets whether the object is collected.

#### Parameters

|                  |  |
|------------------|--|
| <i>collected</i> | True if the object is collected, false otherwise |
|------------------|--|

## 6.5.3 Member Data Documentation

### 6.5.3.1 Collected

```
bool Collectable::Collected [protected]
```

The documentation for this class was generated from the following file:

- [src/Collectables/Collectable.h](#)

## 6.6 Enemy Class Reference

```
#include <Enemy.h>
```

### Public Member Functions

- [Enemy](#) ([World](#) \*worldPtr, double health=100.0, double mass=1.0, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero](#)())
- void [SetTarget](#) (const [Utils::Vec2d](#) &target)
- virtual double [GetMoveForce](#) () const =0
- virtual double [GetSize](#) () const =0
- virtual [Col](#) [GetColor](#) () const =0

## Public Member Functions inherited from [GameObject](#)

- [GameObject](#) ([World](#) \*worldPtr, double health=0.0, double mass=0.0, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero\(\)](#), double friction=0.00)
- [Utils::Vec2d GetPosition](#) () const
- double [GetRotation](#) () const
- bool [IsAlive](#) () const
- void [TakeDamage](#) (double damage)
- void [AddForce](#) (const [Utils::Vec2d](#) &force)
- void [LookAt](#) (const [Utils::Vec2d](#) &target)
- virtual void [Update](#) (double dt)

## 6.6.1 Constructor & Destructor Documentation

### 6.6.1.1 [Enemy\(\)](#)

```
Enemy::Enemy (
    World * worldPtr,
    double health = 100.0,
    double mass = 1.0,
    const Utils::Vec2d & position = Utils::Vec2d::Zero\(\) ) [inline]
```

Constructs a new [Enemy](#) object.

#### Parameters

|                 |                                |
|-----------------|--------------------------------|
| <i>worldPtr</i> | The world that owns the object |
| <i>health</i>   | Max health of the object       |
| <i>mass</i>     | Mass of the object             |
| <i>position</i> | Position of the object         |

### 6.6.1.2 [~Enemy\(\)](#)

```
virtual Enemy::~~Enemy ( ) [virtual], [default]
```

Destroys the [Enemy](#) object (virtual needed for inheritance)

## 6.6.2 Member Function Documentation

### 6.6.2.1 [GetColor\(\)](#)

```
virtual Col Enemy::GetColor ( ) const [pure virtual]
```

Returns the color of the object (needed because of inheritance)

#### Returns

[Col](#) The color of the object

Implemented in [LargeEnemy](#), and [SmallEnemy](#).

#### 6.6.2.2 GetMoveForce()

```
virtual double Enemy::GetMoveForce ( ) const [pure virtual]
```

Returns the move force of the object (needed because of inheritance)

##### Returns

double The move force of the object

Implemented in [LargeEnemy](#), and [SmallEnemy](#).

#### 6.6.2.3 GetSize()

```
virtual double Enemy::GetSize ( ) const [pure virtual]
```

Returns the size of the object (needed because of inheritance)

##### Returns

double The size of the object

Implemented in [LargeEnemy](#), and [SmallEnemy](#).

#### 6.6.2.4 SetTarget()

```
void Enemy::SetTarget (
    const Utils::Vec2d & target ) [inline]
```

Sets the target of the enemy (where it will move towards)

##### Parameters

|               |                   |
|---------------|-------------------|
| <i>target</i> | The target to set |
|---------------|-------------------|

### 6.6.3 Member Data Documentation

#### 6.6.3.1 Target

```
Utils::Vec2d Enemy::Target [protected]
```

The documentation for this class was generated from the following file:

- [src/Enemies/Enemy.h](#)

## 6.7 GameObject Class Reference

```
#include <GameObject.h>
```

### Public Member Functions

- [GameObject](#) ([World](#) \*worldPtr, double health=0.0, double mass=0.0, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero\(\)](#), double friction=0.00)
- [Utils::Vec2d](#) [GetPosition](#) () const
- double [GetRotation](#) () const
- bool [IsAlive](#) () const
- void [TakeDamage](#) (double damage)
- void [AddForce](#) (const [Utils::Vec2d](#) &force)
- void [LookAt](#) (const [Utils::Vec2d](#) &target)
- virtual void [Update](#) (double dt)

### 6.7.1 Constructor & Destructor Documentation

#### 6.7.1.1 GameObject()

```
GameObject::GameObject (
    World * worldPtr,
    double health = 0.0,
    double mass = 0.0,
    const Utils::Vec2d & position = Utils::Vec2d::Zero\(\),
    double friction = 0.00 ) [inline]
```

Construct a new [GameObject](#).

#### Parameters

|                 |                                |
|-----------------|--------------------------------|
| <i>worldPtr</i> | The world that owns the object |
| <i>health</i>   | Max health of the object       |
| <i>mass</i>     | Mass of the object             |
| <i>position</i> | Position of the object         |
| <i>friction</i> | Friction of the object         |

#### 6.7.1.2 ~GameObject()

```
virtual GameObject::~~GameObject ( ) [virtual], [default]
```

Destroy the Game Object object (virtual needed for inheritance)

### 6.7.2 Member Function Documentation

#### 6.7.2.1 AddForce()

```
void GameObject::AddForce (
    const Utils::Vec2d & force ) [inline]
```

Adds force to the object.

## Parameters

|              |                  |
|--------------|------------------|
| <i>force</i> | The force to add |
|--------------|------------------|

### 6.7.2.2 Destroy()

```
void GameObject::Destroy ( ) [inline]
```

Destroys the object.

### 6.7.2.3 Draw()

```
virtual void GameObject::Draw ( ) const [pure virtual]
```

Draws the object.

Implemented in [CircleBullet](#), [Coin](#), [LargeEnemy](#), [SmallEnemy](#), and [Player](#).

### 6.7.2.4 DrawHealthBar()

```
void GameObject::DrawHealthBar (
    const Utils::Vec2d & position,
    const Utils::Vec2d & size ) const [protected]
```

### 6.7.2.5 GetPosition()

```
Utils::Vec2d GameObject::GetPosition ( ) const [inline]
```

Returns the position of the object.

## Returns

[Utils::Vec2d](#) The position of the object

### 6.7.2.6 GetRotation()

```
double GameObject::GetRotation ( ) const [inline]
```

Returns the rotation of the object.

## Returns

double The rotation of the object

#### 6.7.2.7 IsAlive()

```
bool GameObject::IsAlive ( ) const [inline]
```

Returns whether the object is alive.

##### Returns

bool Whether the object is alive

#### 6.7.2.8 LookAt()

```
void GameObject::LookAt (
    const Utils::Vec2d & target )
```

Rotates the object to look at a target.

## Parameters

|               |                       |
|---------------|-----------------------|
| <i>target</i> | The target to look at |
|---------------|-----------------------|

### 6.7.2.9 TakeDamage()

```
void GameObject::TakeDamage (
    double damage ) [inline]
```

Deals damage to the object (decreases health, destroys if health is  $\leq 0$ )

## Parameters

|               |                              |
|---------------|------------------------------|
| <i>damage</i> | The amount of damage to deal |
|---------------|------------------------------|

### 6.7.2.10 Update()

```
void GameObject::Update (
    double dt ) [virtual]
```

Updates the object (using euler integration)

## Parameters

|           |                |
|-----------|----------------|
| <i>dt</i> | The delta time |
|-----------|----------------|

Reimplemented in [Bullet](#), [Coin](#), [LargeEnemy](#), [SmallEnemy](#), and [Player](#).

## 6.7.3 Member Data Documentation

### 6.7.3.1 Acceleration

```
Utils::Vec2d GameObject::Acceleration [protected]
```

### 6.7.3.2 Alive

```
bool GameObject::Alive [protected]
```

### 6.7.3.3 Force

```
Utils::Vec2d GameObject::Force [protected]
```

#### 6.7.3.4 Friction

```
double GameObject::Friction [protected]
```

#### 6.7.3.5 Health

```
double GameObject::Health [protected]
```

#### 6.7.3.6 Mass

```
double GameObject::Mass [protected]
```

#### 6.7.3.7 MaxHealth

```
double GameObject::MaxHealth [protected]
```

#### 6.7.3.8 Position

```
Utils::Vec2d GameObject::Position [protected]
```

#### 6.7.3.9 Rotation

```
double GameObject::Rotation [protected]
```

#### 6.7.3.10 Velocity

```
Utils::Vec2d GameObject::Velocity [protected]
```

#### 6.7.3.11 WorldPtr

```
World* GameObject::WorldPtr [protected]
```

The documentation for this class was generated from the following files:

- [src/GameObjects/GameObject.h](#)
- [src/GameObjects/GameObject.cpp](#)

## 6.8 LargeEnemy Class Reference

```
#include <LargeEnemy.h>
```

## Public Member Functions

- [LargeEnemy](#) ([World](#) \*worldPtr, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero](#)())
- void [Update](#) (double dt) override
- double [GetSize](#) () const override

- void [SetTarget](#) (const [Utils::Vec2d](#) &target)

## Public Member Functions inherited from [GameObject](#)

- [GameObject](#) ([World](#) \*worldPtr, double health=0.0, double mass=0.0, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero](#)(), double friction=0.00)
- [Utils::Vec2d](#) [GetPosition](#) () const
- double [GetRotation](#) () const
- bool [IsAlive](#) () const
- void [TakeDamage](#) (double damage)
- void [AddForce](#) (const [Utils::Vec2d](#) &force)
- void [LookAt](#) (const [Utils::Vec2d](#) &target)

## 6.8.1 Constructor & Destructor Documentation

### 6.8.1.1 [LargeEnemy](#)()

```
LargeEnemy::LargeEnemy (
    World * worldPtr,
    const Utils::Vec2d & position = Utils::Vec2d::Zero() ) [inline]
```

Constructs a new [SmallEnemy](#) object.

#### Parameters

|                 |                                |
|-----------------|--------------------------------|
| <i>worldPtr</i> | The world that owns the object |
| <i>position</i> | The position of the object     |

## 6.8.2 Member Function Documentation

### 6.8.2.1 [Draw](#)()

```
void LargeEnemy::Draw ( ) const [override], [virtual]
```

Draws the small enemy object.

Implements [GameObject](#).

### 6.8.2.2 GetColor()

```
Col LargeEnemy::GetColor ( ) const [inline], [override], [virtual]
```

Returns the color of the object.

#### Returns

[Col](#) The color of the object

Implements [Enemy](#).

### 6.8.2.3 GetMoveForce()

```
double LargeEnemy::GetMoveForce ( ) const [inline], [override], [virtual]
```

Returns the move force of the object.

#### Returns

double The move force of the object

Implements [Enemy](#).

### 6.8.2.4 GetSize()

```
double LargeEnemy::GetSize ( ) const [inline], [override], [virtual]
```

Returns the size of the object.

#### Returns

double The size of the object

Implements [Enemy](#).

### 6.8.2.5 Update()

```
void LargeEnemy::Update (  
    double dt ) [override], [virtual]
```

Updates the small enemy object.

#### Parameters

|      |                |
|------|----------------|
| $dt$ | The delta time |
|------|----------------|

Reimplemented from [GameObject](#).

The documentation for this class was generated from the following files:

- src/Enemies/[LargeEnemy.h](#)
- src/Enemies/[LargeEnemy.cpp](#)

## 6.9 ParticleSystem Class Reference

```
#include <ParticleSystem.h>
```

### Public Member Functions

- `size_t` [GetParticleCount](#) () const
- void [Emit](#) (const [Utils::Vec2d](#) &position, const [Utils::Vec2d](#) &direction, double randomAngle, double lifetime, const [Col](#) &startColor, const [Col](#) &endColor, double startSize, double endSize, size\_t count)
- void [Update](#) (double dt)

### 6.9.1 Constructor & Destructor Documentation

#### 6.9.1.1 ParticleSystem()

```
ParticleSystem::ParticleSystem ( )
```

Constructs a new Particle System object.

#### 6.9.1.2 ~ParticleSystem()

```
ParticleSystem::~~ParticleSystem ( ) [default]
```

Destroys the Particle System object.

### 6.9.2 Member Function Documentation

#### 6.9.2.1 Draw()

```
void ParticleSystem::Draw ( ) const
```

Draws the particles in the system.

#### 6.9.2.2 Emit()

```
void ParticleSystem::Emit (
    const Utils::Vec2d & position,
    const Utils::Vec2d & direction,
    double randomAngle,
    double lifetime,
    const Col & startColor,
    const Col & endColor,
    double startSize,
    double endSize,
    size_t count )
```

Emits particles with given parameters.

**Parameters**

|                    |   |
|--------------------|---|
| <i>position</i>    | The position to emit the particles from           |
| <i>direction</i>   | The direction the particles will move             |
| <i>randomAngle</i> | The max angle the direction will be randomized by |
| <i>lifetime</i>    | The lifetime of the particles in seconds          |
| <i>startColor</i>  | The starting color of the particles               |
| <i>endColor</i>    | The ending color of the particles                 |
| <i>startSize</i>   | The starting size of the particles                |
| <i>endSize</i>     | The ending size of the particles                  |
| <i>count</i>       | The number of particles to emit                   |

**6.9.2.3 GetParticleCount()**

```
size_t ParticleSystem::GetParticleCount ( ) const [inline]
```

Returns the number of particles in the system.

**Returns**

`size_t` The number of particles in the system

**6.9.2.4 Update()**

```
void ParticleSystem::Update (
    double dt )
```

Updates the particles in the system.

**Parameters**

|           |                |
|-----------|----------------|
| <i>dt</i> | The delta time |
|-----------|----------------|

The documentation for this class was generated from the following files:

- [src/ParticleSystem/ParticleSystem.h](#)
- [src/ParticleSystem/ParticleSystem.cpp](#)

**6.10 Player Class Reference**

```
#include <Player.h>
```

**Public Member Functions**

- [Player](#) ([World](#) \*worldPtr, const [Utils::Vec2d](#) &position=[Utils::Vec2d::Zero\(\)](#))

## 6.10.1 Constructor & Destructor Documentation

### 6.10.1.1 [Player\(\)](#)

```
Player::Player (
    World * worldPtr,
    const Utils::Vec2d & position = Utils::Vec2d::Zero\(\) ) [inline]
```

Constructs a new [Player](#) object.

#### Parameters

|                 |                                |
|-----------------|--------------------------------|
| <i>worldPtr</i> | The world that owns the object |
| <i>position</i> | The position of the object     |

### 6.10.1.2 [~Player\(\)](#)

```
Player::~~Player ( ) [default]
```

Destroys the [Player](#) object.

## 6.10.2 Member Function Documentation

### 6.10.2.1 [AddCoin\(\)](#)

```
void Player::AddCoin (
    size_t count = 1 ) [inline]
```

Adds coins to the player.

#### Parameters

|              |                            |
|--------------|----------------------------|
| <i>count</i> | The number of coins to add |
|--------------|----------------------------|

### 6.10.2.2 Draw()

```
void Player::Draw ( ) const [override], [virtual]
```

Draws the player object.

Implements [GameObject](#).

### 6.10.2.3 GetCoinCount()

```
size_t Player::GetCoinCount ( ) const [inline]
```

Returns the coin count of the player.

#### Returns

size\_t The coin count of the player

### 6.10.2.4 Update()

```
void Player::Update (
    double dt ) [override], [virtual]
```

Updates the player object.

#### Parameters

|           |                |
|-----------|----------------|
| <i>dt</i> | The delta time |
|-----------|----------------|

Reimplemented from [GameObject](#).

The documentation for this class was generated from the following files:

- src/GameObjects/[Player.h](#)
- src/GameObjects/[Player.cpp](#)

## 6.11 SmallEnemy Class Reference

```
#include <SmallEnemy.h>
```

#### Public Member Functions

## 6.11.1 Constructor & Destructor Documentation

### 6.11.1.1 [SmallEnemy\(\)](#)

```
SmallEnemy::SmallEnemy (
    World * worldPtr,
    const Utils::Vec2d & position = Utils::Vec2d::Zero\(\) ) [inline]
```

Constructs a new [SmallEnemy](#) object.

#### Parameters

|                 |                                |
|-----------------|--------------------------------|
| <i>worldPtr</i> | The world that owns the object |
| <i>position</i> | The position of the object     |

## 6.11.2 Member Function Documentation

### 6.11.2.1 [Draw\(\)](#)

```
void SmallEnemy::Draw ( ) const [override], [virtual]
```

Draws the small enemy object.

Implements [GameObject](#).

### 6.11.2.2 [GetColor\(\)](#)

```
Col SmallEnemy::GetColor ( ) const [inline], [override], [virtual]
```

Returns the color of the object.

#### Returns

[Col](#) The color of the object

Implements [Enemy](#).

### 6.11.2.3 GetMoveForce()

```
double SmallEnemy::GetMoveForce ( ) const [inline], [override], [virtual]
```

Returns the move force of the object.

#### Returns

double The move force of the object

Implements [Enemy](#).

### 6.11.2.4 GetSize()

```
double SmallEnemy::GetSize ( ) const [inline], [override], [virtual]
```

Returns the size of the object.

#### Returns

double The size of the object

Implements [Enemy](#).

### 6.11.2.5 Update()

```
void SmallEnemy::Update (
    double dt ) [override], [virtual]
```

Updates the small enemy object.

#### Parameters

|           |                |
|-----------|----------------|
| <i>dt</i> | The delta time |
|-----------|----------------|

Reimplemented from [GameObject](#).

The documentation for this class was generated from the following files:

- src/Enemies/[SmallEnemy.h](#)
- src/Enemies/[SmallEnemy.cpp](#)

- static [Vec2](#) [Right](#) ()

**6.12.1 Constructor & Destructor Documentation****6.12.1.1 Vec2() [1/2]**

```
template<typename T >
Utils::Vec2< T >::Vec2 ( ) [inline]
```

Constructs a new [Vec2](#) object with a given type (default values are 0)

**6.12.1.2 Vec2() [2/2]**

```
template<typename T >
Utils::Vec2< T >::Vec2 (
    T x,
    T y ) [inline]
```

Constructs a new [Vec2](#) object with a given type and given values.

**Parameters**

|          |             |
|----------|-------------|
| <i>x</i> | The x value |
| <i>y</i> | The y value |

**6.12.1.3 ~Vec2()**

```
template<typename T >
Vec2 Utils::Vec2< T >::~Vec2 ( ) [default]
```

**6.12.2 Member Function Documentation****6.12.2.1 Down()**

```
template<typename T >
static Vec2 Utils::Vec2< T >::Down ( ) [inline], [static]
```

Returns a unit vector pointing down.

**Returns**

[Vec2](#) The down vector

**6.12.2.2 FromAngle()**

```
template<typename T >
static Vec2 Utils::Vec2< T >::FromAngle (
    double angle ) [inline], [static]
```

Creates a vector from an angle.

**Parameters**

|              |           |
|--------------|-----------|
| <i>angle</i> | The angle |
|--------------|-----------|

**Returns**

[Vec2](#) The vector from the angle

**6.12.2.3 GetAngle()**

```
template<typename T >
double Utils::Vec2< T >::GetAngle ( ) const [inline]
```

Returns the angle of the vector.

**Returns**

double The angle of the vector

**6.12.2.4 GetLength()**

```
template<typename T >
double Utils::Vec2< T >::GetLength ( ) const [inline]
```

Returns the length of the vector.

**Returns**

double The length of the vector

**6.12.2.5 GetLengthSquared()**

```
template<typename T >
double Utils::Vec2< T >::GetLengthSquared ( ) const [inline]
```

Returns the squared length of the vector.

**Returns**

double The squared length of the vector

**6.12.2.6 GetNormalized()**

```
template<typename T >
Vec2 Utils::Vec2< T >::GetNormalized ( ) const [inline]
```

Returns the normalized vector.

**Returns**

Vec2 The normalized vector

**6.12.2.7 GetX()**

```
template<typename T >
T Utils::Vec2< T >::GetX ( ) const [inline]
```

Returns the x value.

**Returns**

T The x value

#### 6.12.2.8 GetY()

```
template<typename T >
T Utils::Vec2< T >::GetY ( ) const [inline]
```

Returns the y value.

##### Returns

T The y value

#### 6.12.2.9 Left()

```
template<typename T >
static Vec2 Utils::Vec2< T >::Left ( ) [inline], [static]
```

Returns a unit vector pointing left.

##### Returns

Vec2 The left vector

#### 6.12.2.10 One()

```
template<typename T >
static Vec2 Utils::Vec2< T >::One ( ) [inline], [static]
```

Returns a one vector.

##### Returns

Vec2 The one vector

#### 6.12.2.11 operator Vector2()

```
template<typename T >
Utils::Vec2< T >::operator Vector2 ( ) const [inline]
```

#### 6.12.2.12 operator\*() [1/2]

```
template<typename T >
Vec2 Utils::Vec2< T >::operator* (
    const T & other ) const [inline]
```

Returns the element-wise product of two vectors.

## Parameters

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

## Returns

[Vec2](#) The product of the two vectors

**6.12.2.13 operator\*() [2/2]**

```
template<typename T >
T Utils::Vec2< T >::operator* (
    const Vec2< T > & other ) const [inline]
```

Returns the dot product of two vectors.

## Parameters

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

## Returns

T The dot product of the two vectors

**6.12.2.14 operator\*=( ) [1/2]**

```
template<typename T >
Vec2 & Utils::Vec2< T >::operator*= (
    const T & other ) [inline]
```

Multiplies the vector with a scalar.

## Parameters

|              |            |
|--------------|------------|
| <i>other</i> | The scalar |
|--------------|------------|

## Returns

[Vec2](#)& The current vector

**6.12.2.15 operator\*=( ) [2/2]**

```
template<typename T >
Vec2 & Utils::Vec2< T >::operator*= (
    const Vec2< T > & other ) [inline]
```

Multiplies another vector with the current vector.

## Parameters

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

## Returns

[Vec2](#)& The current vector

**6.12.2.16 operator+()**

```
template<typename T >
Vec2 Utils::Vec2< T >::operator+ (
    const Vec2< T > & other ) const [inline]
```

Returns the sum of two vectors.

## Parameters

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

## Returns

[Vec2](#) The sum of the two vectors

**6.12.2.17 operator+=()**

```
template<typename T >
Vec2 & Utils::Vec2< T >::operator+= (
    const Vec2< T > & other ) [inline]
```

Adds another vector to the current vector.

## Parameters

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

## Returns

[Vec2](#)& The current vector

**6.12.2.18 operator-() [1/2]**

```
template<typename T >
Vec2 Utils::Vec2< T >::operator- ( ) const [inline]
```

Returns the negation of the vector.

## Returns

[Vec2](#) The negation of the vector

### 6.12.2.19 operator-() [2/2]

```
template<typename T >
Vec2 Utils::Vec2< T >::operator- (
    const Vec2< T > & other ) const [inline]
```

Returns the difference of two vectors.

#### Parameters

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

#### Returns

[Vec2](#) The difference of the two vectors

### 6.12.2.20 operator-=( )

```
template<typename T >
Vec2 & Utils::Vec2< T >::operator-= (
    const Vec2< T > & other ) [inline]
```

Subtracts another vector from the current vector.

#### Parameters

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

#### Returns

[Vec2&](#) The current vector

### 6.12.2.21 operator/( )

```
template<typename T >
Vec2 Utils::Vec2< T >::operator/ (
    const T & other ) const [inline]
```

Returns the element-wise division of two vectors.

#### Parameters

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

#### Returns

[Vec2](#) The division of the two vectors

**6.12.2.22 operator/=( ) [1/2]**

```
template<typename T >
Vec2 & Utils::Vec2< T >::operator/= (
    const T & other ) [inline]
```

Divides the vector with a scalar.

**Parameters**

|              |            |
|--------------|------------|
| <i>other</i> | The scalar |
|--------------|------------|

**Returns**

[Vec2](#)& The current vector

**6.12.2.23 operator/=( ) [2/2]**

```
template<typename T >
Vec2 & Utils::Vec2< T >::operator/= (
    const Vec2< T > & other ) [inline]
```

Divides another vector with the current vector.

**Parameters**

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

**Returns**

[Vec2](#)& The current vector

**6.12.2.24 operator^()**

```
template<typename T >
T Utils::Vec2< T >::operator^ (
    const Vec2< T > & other ) const [inline]
```

Returns the cross product of two vectors.

**Parameters**

|              |                  |
|--------------|------------------|
| <i>other</i> | The other vector |
|--------------|------------------|

**Returns**

T The cross product of the two vectors

#### 6.12.2.25 Right()

```
template<typename T >
static Vec2 Utils::Vec2< T >::Right ( ) [inline], [static]
```

Returns a unit vector pointing right.

##### Returns

[Vec2](#) The right vector

#### 6.12.2.26 Rotate()

```
template<typename T >
Vec2 Utils::Vec2< T >::Rotate (
    double angle ) const [inline]
```

Rotates the vector by a given angle.

##### Parameters

|              |                                   |
|--------------|-----------------------------------|
| <i>angle</i> | The angle to rotate the vector by |
|--------------|-----------------------------------|

##### Returns

[Vec2](#) The rotated vector

#### 6.12.2.27 SetX()

```
template<typename T >
void Utils::Vec2< T >::SetX (
    T x ) [inline]
```

Sets the x value.

##### Parameters

|          |                 |
|----------|-----------------|
| <i>x</i> | The new x value |
|----------|-----------------|

#### 6.12.2.28 SetY()

```
template<typename T >
void Utils::Vec2< T >::SetY (
    T y ) [inline]
```

Sets the y value.

## Parameters

|                |                 |
|----------------|-----------------|
| <code>y</code> | The new y value |
|----------------|-----------------|

**6.12.2.29 Up()**

```
template<typename T >
static Vec2 Utils::Vec2< T >::Up ( ) [inline], [static]
```

Returns a unit vector pointing up.

## Returns

[Vec2](#) The up vector

**6.12.2.30 Zero()**

```
template<typename T >
static Vec2 Utils::Vec2< T >::Zero ( ) [inline], [static]
```

Returns a zero vector.

## Returns

[Vec2](#) The zero vector

The documentation for this class was generated from the following file:

- `src/Utils/Vec2.h`

**6.13 World Class Reference**

```
#include <World.h>
```

**Public Member Functions**

- void [AddCollectable](#) (std::unique\_ptr< [Collectable](#) > collectable)
- void [AddEnemy](#) (std::unique\_ptr< [Enemy](#) > enemy)
- void [AddBullet](#) (std::unique\_ptr< [Bullet](#) > bullet)
- void [Update](#) (double dt)
- [Player](#) \* [GetMainPlayer](#) ()

**6.13.1 Constructor & Destructor Documentation****6.13.1.1 World()**

```
World::World ( )
```

Constructs a new [World](#) object.

**6.13.2 Member Function Documentation****6.13.2.1 AddBullet()**

```
void World::AddBullet (
    std::unique_ptr< Bullet > bullet ) [inline]
```

Adds a bullet to the world (takes ownership)

## Parameters

|               |                   |
|---------------|-------------------|
| <i>bullet</i> | The bullet to add |
|---------------|-------------------|

**6.13.2.2 AddCollectable()**

```
void World::AddCollectable (
    std::unique_ptr< Collectable > collectable ) [inline]
```

Adds a collectable to the world (takes ownership)

## Parameters

|                    |                        |
|--------------------|------------------------|
| <i>collectable</i> | The collectable to add |
|--------------------|------------------------|

**6.13.2.3 AddEnemy()**

```
void World::AddEnemy (
    std::unique_ptr< Enemy > enemy ) [inline]
```

Adds an enemy to the world (takes ownership)

## Parameters

|              |                  |
|--------------|------------------|
| <i>enemy</i> | The enemy to add |
|--------------|------------------|

**6.13.2.4 Draw()**

```
void World::Draw ( ) const
```

Calls the Draw function of all objects in the world and shows FPS.

**6.13.2.5 GetMainPlayer()**

```
Player * World::GetMainPlayer ( ) [inline]
```

Returns the main player.

## Returns

Player\* The main player (the world keeps ownership of the player object)

**6.13.2.6 Update()**

```
void World::Update (
    double dt )
```

Generates objects, calls the Update function of all objects in the world.

**Parameters**

|           |                |
|-----------|----------------|
| <i>dt</i> | The delta time |
|-----------|----------------|

### 7.15.1 Function Documentation

#### 7.15.1.1 CheckCollision() [1/4]

```

bool CheckCollision (
    const Enemy & enemy,
    const Bullet & bullet )

```

Checks if the enemy collides with the bullet (AABB collision detection)

#### Parameters

|               |                  |
|---------------|------------------|
| <i>enemy</i>  | The enemy object |
| <i>bullet</i> | The enemy object |

#### Returns

bool True if the enemy collides with the bullet, false otherwise

#### 7.15.1.2 CheckCollision() [2/4]

```

bool CheckCollision (

```

```
const Player & player,  
const Bullet & bullet )
```

Checks if the player collides with the bullet (AABB collision detection)

#### Parameters

|               |                   |
|---------------|-------------------|
| <i>player</i> | The player object |
| <i>bullet</i> | The bullet object |

#### Returns

bool True if the player collides with the bullet, false otherwise

### 7.15.1.3 CheckCollision() [3/4]

```
bool CheckCollision (  
    const Player & player,  
    const Collectable & collectable )
```

Checks if the player collides with the collectable (AABB collision detection)

#### Parameters

|                    |                        |
|--------------------|------------------------|
| <i>player</i>      | The player object      |
| <i>collectable</i> | The collectable object |

#### Returns

bool True if the player collides with the collectable, false otherwise

### 7.15.1.4 CheckCollision() [4/4]

```
bool CheckCollision (  
    const Player & player,  
    const Enemy & enemy )
```

Checks if the player collides with the enemy (AABB collision detection)

#### Parameters

|               |                   |
|---------------|-------------------|
| <i>player</i> | The player object |
| <i>enemy</i>  | The enemy object  |

#### Returns

bool True if the player collides with the enemy, false otherwise

## 7.16 src/Collisions/Collisions.h File Reference

### 7.16.1 Function Documentation

#### 7.16.1.1 [CheckCollision\(\)](#) [1/4]

```
bool CheckCollision (  
    const Enemy & enemy,  
    const Bullet & bullet )
```

Checks if the enemy collides with the bullet (AABB collision detection)

#### Parameters

|               |                  |
|---------------|------------------|
| <i>enemy</i>  | The enemy object |
| <i>bullet</i> | The enemy object |

#### Returns

bool True if the enemy collides with the bullet, false otherwise

#### 7.16.1.2 [CheckCollision\(\)](#) [2/4]

```
bool CheckCollision (  
    const Player & player,  
    const Bullet & bullet )
```

Checks if the player collides with the bullet (AABB collision detection)

#### Parameters

|               |                   |
|---------------|-------------------|
| <i>player</i> | The player object |
| <i>bullet</i> | The bullet object |

#### Returns

bool True if the player collides with the bullet, false otherwise

#### 7.16.1.3 [CheckCollision\(\)](#) [3/4]

```
bool CheckCollision (  

```

```
const Player & player,  
const Collectable & collectable )
```

Checks if the player collides with the collectable (AABB collision detection)

#### Parameters

|                    |                        |
|--------------------|------------------------|
| <i>player</i>      | The player object      |
| <i>collectable</i> | The collectable object |

#### Returns

bool True if the player collides with the collectable, false otherwise

#### 7.16.1.4 CheckCollision() [4/4]

```
bool CheckCollision (  
    const Player & player,  
    const Enemy & enemy )
```

Checks if the player collides with the enemy (AABB collision detection)

#### Parameters

|               |                   |
|---------------|-------------------|
| <i>player</i> | The player object |
| <i>enemy</i>  | The enemy object  |

#### Returns

bool True if the player collides with the enemy, false otherwise
